PROGRESS TRACKER

DevOps Roadmap

From Linux to GitOps in 15 phases | Updated October 27, 2026

5 of 15 phases completed

COMPLETED
5 of 15
Linux to Docker

CURRENT PHASE
AWS Cloud
IAM done, EC2 next

NEXT PHASE
Python Automation
After AWS

ROADMAP AND PROGRESS

- ✓ **Linux Fundamentals** — Core commands, permissions, processes and the shell. — COMPLETED
- ✓ **Networking Fundamentals** — DNS, SSH, CIDR/subnetting, protocols and troubleshooting. — COMPLETED
- ✓ **Git & GitHub** — Version control and the GitHub workflow. — COMPLETED
- ✓ **Bash Scripting** — Variables, conditions, loops, functions and exit codes. — COMPLETED
- ✓ **Docker** — Course plus the ServiceDesk full-stack app running in Compose. — COMPLETED
- 6 **AWS Cloud** — IAM done. Next: EC2, S3, VPC, RDS, ALB, CloudWatch, ECR, Lambda basics. — IN PROGRESS
- 7 **Python Automation** — Practical scripts, for example AWS tasks with boto3. — UPCOMING
- 8 **GitHub Actions CI/CD** — Automate build, test, image push and deployment. — UPCOMING
- 9 **Terraform** — Provision and manage cloud infrastructure as code. — UPCOMING
- 10 **Integrated Deployment Project** — GitHub, Docker, AWS, Terraform and Actions, end to end. — UPCOMING
- 11 **Kubernetes** — Container orchestration fundamentals and deployments. — UPCOMING
- 12 **Helm** — Package and manage Kubernetes applications. — UPCOMING
- 13 **Observability** — Prometheus, Grafana and OpenTelemetry. — UPCOMING
- 14 **DevOps Security** — Secrets, image scanning and least privilege. — UPCOMING
- 15 **GitOps with Argo CD** — Git-driven continuous delivery with Argo CD. — UPCOMING

PHASE 6 | IN PROGRESS

Current Focus: AWS Cloud

2 of 9 steps done. Finish the checkpoint project before moving on.

AWS CHECKLIST

- [x] **Cloud basics, account setup and regions** — DONE
  AWS account created, regions and zones covered
- [x] **IAM fundamentals and practice** — DONE
  Users, managed and custom policies
- [ ] **EC2**
  Launch, SSH, Nginx, attach an S3 read-only role, terminate
- [ ] **S3**
  Bucket, upload, download, versioning
- [ ] **VPC and security groups**
  Subnets, route tables, internet gateway, NAT
- [ ] **RDS**
  Managed MySQL for ServiceDesk
- [ ] **ALB basics, CloudWatch, ECR**
  Load balancer, alarms, image registry
- [ ] **Checkpoint project** — GOAL
  ServiceDesk on EC2 + RDS inside a custom VPC
- [ ] **Lambda basics**
  Last and light. Advanced mastery not needed yet

NEXT 3 ACTIONS

1. Watch the EC2 section, then launch, SSH, run Nginx, attach the role, terminate.
2. Do S3 basics: create a bucket, upload files, turn on versioning.
3. Push ServiceDesk to GitHub with a README (architecture, services, compose steps).

SAFE PRACTICE HABITS

- Keep the Budgets alert on and check the Free Tier page weekly.
- Use one region for everything, and terminate resources after each session.
- Never paste access keys or secrets into chats, screenshots or GitHub.

LEARNING ORDER

Linux > Networking > Git/GitHub > Bash > Docker > **AWS Cloud** > Python Automation > GitHub Actions > Terraform > Integrated Deployment Project > Kubernetes > Helm > Observability > DevOps Security > GitOps with Argo CD
